Clearnet Calendar

CONSOLIDATED MARKET DATA NOTIFICATIONS

The Clearnet Calendar is a consolidated schedule of changes to market data feeds and trading interfaces. It's the industry standard for efficient, dependable management of technical notifications. Using Clearnet's MyCalendar web-based tool, you can create custom reports and filter just the sources you need.

Clearnet MyPlanner

NOTIFICATION MANAGEMENT FOR MARKET DATA PROFESSIONALS

For enterprise-wide market data management, MyPlanner offers professionals a planning and control system using custom calendars and tracking capabilities. Fully integrated with the Clearnet Calendar, MyPlanner provides a unique management system for professionals dealing with a mix of internal and external bulletins, due dates, and project documentation.

No Sev-1s!

With hundreds of notifications flowing into your firm each week from many sources, it's easy for a notification to get lost in the shuffle. In the worst case, failure to respond to an exchange notification can lead to a "Sev-1" outage. A severity one outage means traders are completely shut out of the market by a technical failure, which might have been as simple as an IP address change that was not implemented on time. Clearnet plays a key role in preventing this scenario.

Since 1994, Clearnet has provided market data professionals with the authoritative tool for managing technical notifications from exchanges and trading services around the world. Our service is used by firms maintaining systems dependent on market data feeds. Subscribers include market data vendors, financial houses, ISVs, and trading services including exchanges, ECNs, ATs, and MTFs.

Customize the Clearnet Calendar to Meet Your Firm's Needs

Clearnet Calendar, Consolidated Market Data Notifications

The Clearnet Calendar is issued each Monday morning in .pdf format to Clearnet subscribers. First published in 1994, this Calendar is a daily diary of changes that affect market data technology, including changes to systems and networks plus related announcements that may affect them, such as tick size changes. Clearnet receives notices from exchanges on a daily basis. We select those that are relevant to professionals maintaining data feed handlers and electronic trading systems for inclusion in the Clearnet Calendar.

Most importantly, we extract target dates from each notification and post these key events to the Calendar. When those dates change (and they often do), we update the Calendar.

Each notification in the Clearnet Calendar is hyperlinked to the underlying document provided by the exchange. What results is an efficient, updated management report of planned changes to market data feeds.

MyCalendar, A Web-Based Tool to Create Custom Calendars

MyCalendar is a powerful new service for Clearnet subscribers as an upgrade to the Clearnet Calendar. This web-based tool enables you to create custom calendars and inquiries. You design filters to show only the sources relevant to your firm, so you focus attention where it matters.

Functions include:

- Create one or more custom filters to report on just the exchanges you want.
- Save filters for future use. They are available on MyCalendar only to you.
- Display notifications or calendar items matching your filter.
- Create and download a .pdf of your custom Clearnet Calendar for distribution to your internal team.

MyPlanner, Notification Management for Market Data Professionals

If your job requires you to stay on top of technical notifications from exchanges, market data vendors and software providers, then your firm needs Clearnet MyPlanner, the unique system that helps you manage these critical, time-sensitive announcements more effectively. MyPlanner provides market data professionals with the tools to plan and control notification workflow. The system enables you to make feed handler and exchange-driven changes visible to everyone who needs to know, to assure changes are implemented on time.

Built on the Clearnet Calendar

At the core of MyPlanner is the Clearnet Calendar database. Adding advanced, targeted functionality MyPlanner transforms that database into your firm's custom notification planning and control system. The MyPlanner design draws on our 15+ years experience publishing the Clearnet Calendar, plus the input of our subscribers including the world's leading trading firms, market data vendors, and ISV's.

This customized Clearnet Calendar shows the status of notifications.

Enter status notes and use color to keep focus on key items.

Feature Comparison: MyCalendar vs. MyPlanner

	MyCalendar	MyPlanner
<p>Manage Notifications using the Clearnet Calendar</p> <p>The Clearnet Calendar is made available to subscribers each Monday morning as a .pdf document with hyperlinks to relevant documents from exchanges. This tool has been a market data management favorite since 1994. Both MyCalendar and MyPlanner are built on this Calendar data.</p>	X	X
<p>Filter the Clearnet Calendar for Custom Reporting</p> <p>Filter reports and displays to show only the exchanges and calendar items that are applicable to your firm, enabling you to focus on relevant sources. Design and save different filters for personalized reports.</p>	X	X
<p>Track Notification Workflow by Applying Status Codes</p> <p>From "Pending Analysis" to "Waiting for desk sign-off" to "Completed", Status Codes track where a notification sits in the project cycle. Codes can be customized to fit your organization structure.</p>		X
<p>Add Team Assignments, Project Codes and Notes for Progress Reports</p> <p>Successful project management requires that you assign responsibility and report progress on a regular basis. MyPlanner gives you the tools to capture that information and share it.</p>		X
<p>Expand the List of Market Data Sources You Track</p> <p>Expand the universe of data sources to include your firm's list in addition to those covered by Clearnet. Add calendar items and due dates. MyPlanner can be your enterprise-wide "Master Calendar" for coordinating changes to market data technology.</p>		X
<p>Send Alerts via Email</p> <p>Send alerts via email to your internal customers and colleagues using MyPlanner. An alert contains the link to the original notification, and helps focus attention on key events. MyPlanner records to whom you send alerts and shows this on your status reports.</p>		X
<p>Collaborate with Your Colleagues Around the World</p> <p>MyPlanner supports multiple desktops, so market data planners in various regions and offices can jointly track and control events.</p>		X
<p>Import Clearnet Calendar Data</p> <p>Quickly import data from the Clearnet Calendar into a spreadsheet or your internal systems for further analysis and distribution.</p>		X
